## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/04/2007 has been entered.
2. Applicant's amendment dated 09/14/2007 has been received and entered. Claims 7-13 are pending in the application. Claims 1-6 stand withdrawn from consideration.

### ***Claim Rejections - 35 USC § 102***

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claims 7-13 are rejected under 35 U.S.C 102(e) as being anticipated by Tashiro et al., US Patent Application Publication No. 2006/0176439 A1.

Regarding claims 7-13, those claims are anticipated by Tashiro et al. figure 80 and accompanying text (example 1) which discloses a member for a liquid crystal display (LCD) device comprising an image display cell (inside main seal 322), a plurality of dummy cells (area between dummy seal 324 and 326) formed in a periphery of the image display cell (periphery of the area closed by seal 322), wherein both the image display cell and the dummy cell are formed by a similar pixel design (e.g., rectangular with a seal member).

***Response to Arguments***

5. Applicant's arguments filed 09/14/2007 have been fully considered but they are not persuasive.

Applicant's only argument, regarding claims 7 and 11, is that Tashiro et al. does not disclose or suggest "the dummy cell having the liquid crystal sealed therein"; the Examiner is not convinced by this argument since the same is true of the Tashiro et al. dummy cell (portion forming by dummy seal 324 and main seal 322). In particular, as shown in figure 80, the liquid crystal 328 would be filled the portion between two seal members 324 and 322. In addition, only the pixel area (inside-portion of the main seal 322) can be displayed as well; the portion between two seal members (i.e., dummy cell) is for controlling the liquid crystal layer in the pixel area cell (see figure 82a) rather than displayed an image (the dummy cell not displaying the image).

Accordingly, the limitation of claims 7 and 11 met.
